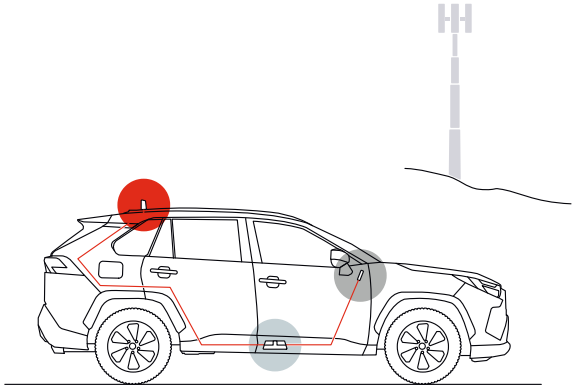
HOW DO CELL SIGNAL BOOSTERS WORK?



01 Outside antenna receives cell signal from the tower.

02 Booster strengthens that signal.

03 Inside antenna broadcasts the boosted signal to use in your car, truck, overland rig, or RV.

WHY YOU NEED A CELL SIGNAL BOOSTER.

When you're on the road (or off-road), trees, mountains, or remote locations can keep cell signal from reaching you, resulting in:

- Dead zones & dropped calls
- Unreliable messaging
- Slow data & buffering

Fortunately, weBoost cell signal boosters bring weak outdoor signal inside and amplify it, so everything works better. Now you and your crew can talk, stream, text, and browse without interruption.
